

CLAIMS

1. A curable composition comprising a polyoxypropylene polymer having a cross-linkable silicon group in a molecule(A), a (meth)acrylic acid ester polymer having a cross-linkable silicon group in its side chain(B), and a (meth)acrylic acid ester polymer having a cross-linkable silicon group only at terminal(C).
2. The curable composition of Claim 1, wherein the polymer (C) is prepared by living radical polymerization.
3. The curable composition of Claim 2, wherein the polymer (C) is prepared by atom transfer radical polymerization.
4. The curable composition of Claim 1, wherein the polymer (B) is obtained by polymerizing a (meth)acrylic acid ester monomer containing a polymerizable monomer having a methyl ester group.
5. The curable composition of any one of Claims 1 to 4, wherein molecular weight distribution of the polymer (B) is at least 1.8 and molecular weight distribution of the polymer (C) is at most 1.8.
6. The curable composition of any one of Claims 1 to 5, wherein weight of (A) in the total weight of (A), (B) and (C) is at most 50 % by weight.
